# ENGINEERING

TECSA started activities in 2005 providing engineering services within the Oil & Gas Industry, increasing since then its capacity in specialized personnel as well as in technological resources. This means a real added value to our Construction Team since our specialists specifically understand the needs of the field and are able to generate technical documentation applicable to all projects.

## SOME OF OUR SERVICES:

- Basic Engineering
- Conceptual Engineering
- Detail Engineering
- Calculation Reports
- Technical specifications
- Process Optimization

# PROJECTS

TECSA has evolved in capacity, always focusing on improving the Engineering Team. We have a staff of professionals specialized in implementing Oil & Gas infrastructure projects under the recommended good practices for the management of the project. We perform works from engineering; we provide materials and equipment, construction and start-ups under strict quality controls of our own and of our clients.

## SOME OF OUR PROJECTS:

- Primary Gas Separators
- Tanking Batteries
- Crude Oil Refinement Plants
- Salt and fresh water Plants
- Installation of conduction pipelines
- Installation of Oil and Gas pipelines

# EQUIPMENT

Since the beginning of our activities, in TECSA we have designed and built many containers under ASME standards as well as packetized processes equipment, modules that have different levels of complexity for process plants, mounted on skid transfer systems which cover different areas of the gas and oil industrial activity.

Making use of this concept we can include lots of equipment, elements and/or products that the company, applying its expertise in Engineering and Construction, is capable of developing, building and installing so that the most demanding requirements of each of our clients are effectively solved.

We enjoy, together with our professionals, not only the ability to develop equipment but also the ability to produce, making all this a great experience in the construction of packetized products, pressure vessels, storage tanks, pre-manufactured spools and metal structures among other conventional equipment in industrial processes.

All our products are manufactured under international standards certifying their quality and reliability to our clients who, with a long history in the market, accompany TECSA giving technology solutions that are applied in different industry processes.

## SOME OF THE MANUFACTURED EQUIPMENT:

- Deoxygenating Water Tower
- Three-phase and two-phase separators
- Slug catcher
- Scraper Traps and Launchers
- Coalescing Filters
- Field Collectors
- API Tanks
